Currently there are several research works undergoing to prevent COVID-19

In this paper, we mainly focus on developing an android based application to identify the COVID-19 containment zone in India.

Depending on the situation a rellef group mat need donation of food water are other suppliers.

There are things that everyone can do to help those who need it.

We have used
Geofencing and
Firebase APIs
(Application Program
Interface) from Google
as the base for
development of this
application.

Says

Thinks

Even small actions and small donations. Make a diifference.

Does

Feels

. The application has been tested in various locations and has been found to yield accurate results.

The application provides an efficient way of showing the identified COVID-19 containment zones to the users in a Google map

. This application further tracks the user's location and checks whether it is present in the list of identified containment zones.
